Myth or Fact...

One of the most well known myths in history, that the Dear Customers and Friends, One of the most well known myths in instory, that the flat, was eventually dispelled by Aristotle in Earth was flat, was eventually long time through covers the third continue DC It took a long time through covers the third century BC. It took a long time through several the third century are this much to be hard for this move to be hard. ne min century be. It work a wing time unrough several periods of history for this myth to be busted. Fortunately periods of history for this myth to be busted. For present day historiete catallite talement, has helped for present day historiete catallite talement. perious of misiory for mis mym to be ousied. Formula has helped for present day biologists, satellite telemetry has helped to remain a compact to the color of th for present any viologists, saterine referrency has neighbor to rewrite our science textbooks at a much faster rate. to rewrite our science textoooks at a much paster this.

As we celebrate 30 years of the Argos system this. As we cereviewe or years of the last three decades year, we note that data from the last three decades have separated myth from fact. Some popular myths propagated before satellite telemetry: all birds instinctively know how to migrate, individuals from the same area migrate to the same place, and waterfowl are only found

We are delighted to feature four myth busting vve me neuginen to jemme jour mynt ousung stories in this newsletter. Contrary to popular stories in this newsletter. in wetlands.

belief, we discover that ducks are found in the aesert; that some juvenues aon t automatically know in which direction to set off for their migration; that know in which direction to set off for their migrate to the same population migrate to the same population migrate to the same population migrate. desert; that some juveniles don't automatically KNOW IN WHICH AIRECTION TO SEL OF FOR THEIR MIGRATION; THAT POPULATION MIGRATE TO the Same place.

NOT All birds from the same population migrate to the Same place.

Not all birds from the same population migrate to the same place.

Not all birds from the same population migrate to the same place.

Not all birds from the same population migrate to the same place. not an orras from the same population migrate to the same place.
We also "dismiss dogma" with recent discoveries from tracking dogfish.
