Towards the Holy Grail...

A customer once asked me what has kept our company and me going cothacke and the interminable mait A customer once asked the what has kept our company and me going over the years through recessions, setbacks and the interminable wait over the years through recessions that would allow us to miniaturize out for new electronic components that would allow us to miniaturize out over the years through recessions, setuacks and the miniaturize our for new electronic components that would allow us to miniaturize our transmitters further In my haste I told him that I manted to do the Dear Customers and Friends, for new electronic components that would allow us to minuaturize out transmitters further. In my haste, I told him that I wanted to do the impossible: make a satellite transmitter that weight nothing and transmitters further. In my maste, I tota rum that I wanted to ao the impossible: make a satellite transmitter that weighs nothing and impossible: make a satellite transmitter that mobile me to it! impossible. Hake a smeame transmitter that weights holds me to it! lasts forever. I just hope that nobody holds me to it! Seriously though, I look back with satisfaction at the progress

Dertously though, I look back with satisfaction at the progress. Two we have made over the 19 years we have been in business. The we have made over the prototope of our 50 solar transmitter. we nave made over the 19 years we have been in business. It years ago, as I held the prototype of our 5g solar transmitter years ago, as I held the prototype have think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in my hands I could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think that we have come in the could not help but think the could not help but think the could not help but think the could not help but the could not help years ago, as I neta me provogpe of our 28 solar transmitter in my hands, I could not help but think that we have come a long way from our original aga bettern powered transmitter. in my nanas, I could not neep out think that we have come a long way from our original 95g battery powered transmitter.

After all cut of the approximatoly 10 000 energies of hirds on uong way from our original 95g dattery powered transmitter.

After all, out of the approximately 10,000 species of birds, only

After all, out of them are hearn enough to be tracked using about one third of them are hearn enough to be tracked using After all, out of the approximately 10,000 species of piras, only about one third of them are heavy enough to be tracked using about one third of them are heavy enough to be tracked using about one third of them are heavy enough to be tracked using about one third of them are heavy enough to be tracked using about one species of piras, only 10,000 species of piras about one third of them are nearly enough to be tracked using a transmitter weighing more than 5g. As you can see, there is much work left to be done

much work left to be done.

We are delighted to feature four stories where our smallest we are acusated to jeature jour stories where our smallest packages have played a crucial role in providing information.

The packages have played a crucial Hobby and Amyr Edicore the packages have played a crucial Hobby and Amyr Edicore the packages have played a crucial Hobby and Amyr Edicore the packages have played a crucial Hobby and Amyr Edicore the packages have played a crucial role in providing information. packages nave prayed a crucial role in providing information, the on several species, namely the Hobby and Amur Falcons, the on several species, namely the Hobby and time con tirelas was provided and tirelas was provided and tirelas was provided and tirelas was provided and tir on several species, namely the Hobby and Amur Falcons, the Burrowing Owl, Kittlitz's Murrelets and tiny sea turtles.

Burrowing Owl, Kittlitz's Murrelets and Christians Many State thank all of the authors. Bornd and Christians Many State thank all of the authors. BUTTOWING OWL, KULLUZ'S MUTTELETS and trny sea turtles. We Meyburg, wish to thank all of the authors: Bernd and Christiane Meyburg, wish to thank and Holon Trofry. John Diatt Frica Madison Cooff Holonid and Holon Trofry.
